

TKZ version 23.07.05 – about document:

## **TKZ version 23.07.05 released!**

### **Features; Added -**

- Possibility to add/correct languages and comments in application;
- Search module in paths adding;
- “What’s this?” actions to explain application functions;
- Settings “Follow symbolic links” & “Copy hitted files”;
- Possibility to creating paths profiles & having different settings to each profile;
- Possibility to modify profile manually;
- Possibility to creating back-ups in many threads.

### **Application’s options:**

Application has been developed for creating back-ups on disks. Additionally, product uses comparison algorithm implemented in C++, which skips not changed files in copy, so it speeds up the whole process and makes creating 10GB back-up possible in less than 1 minute.
